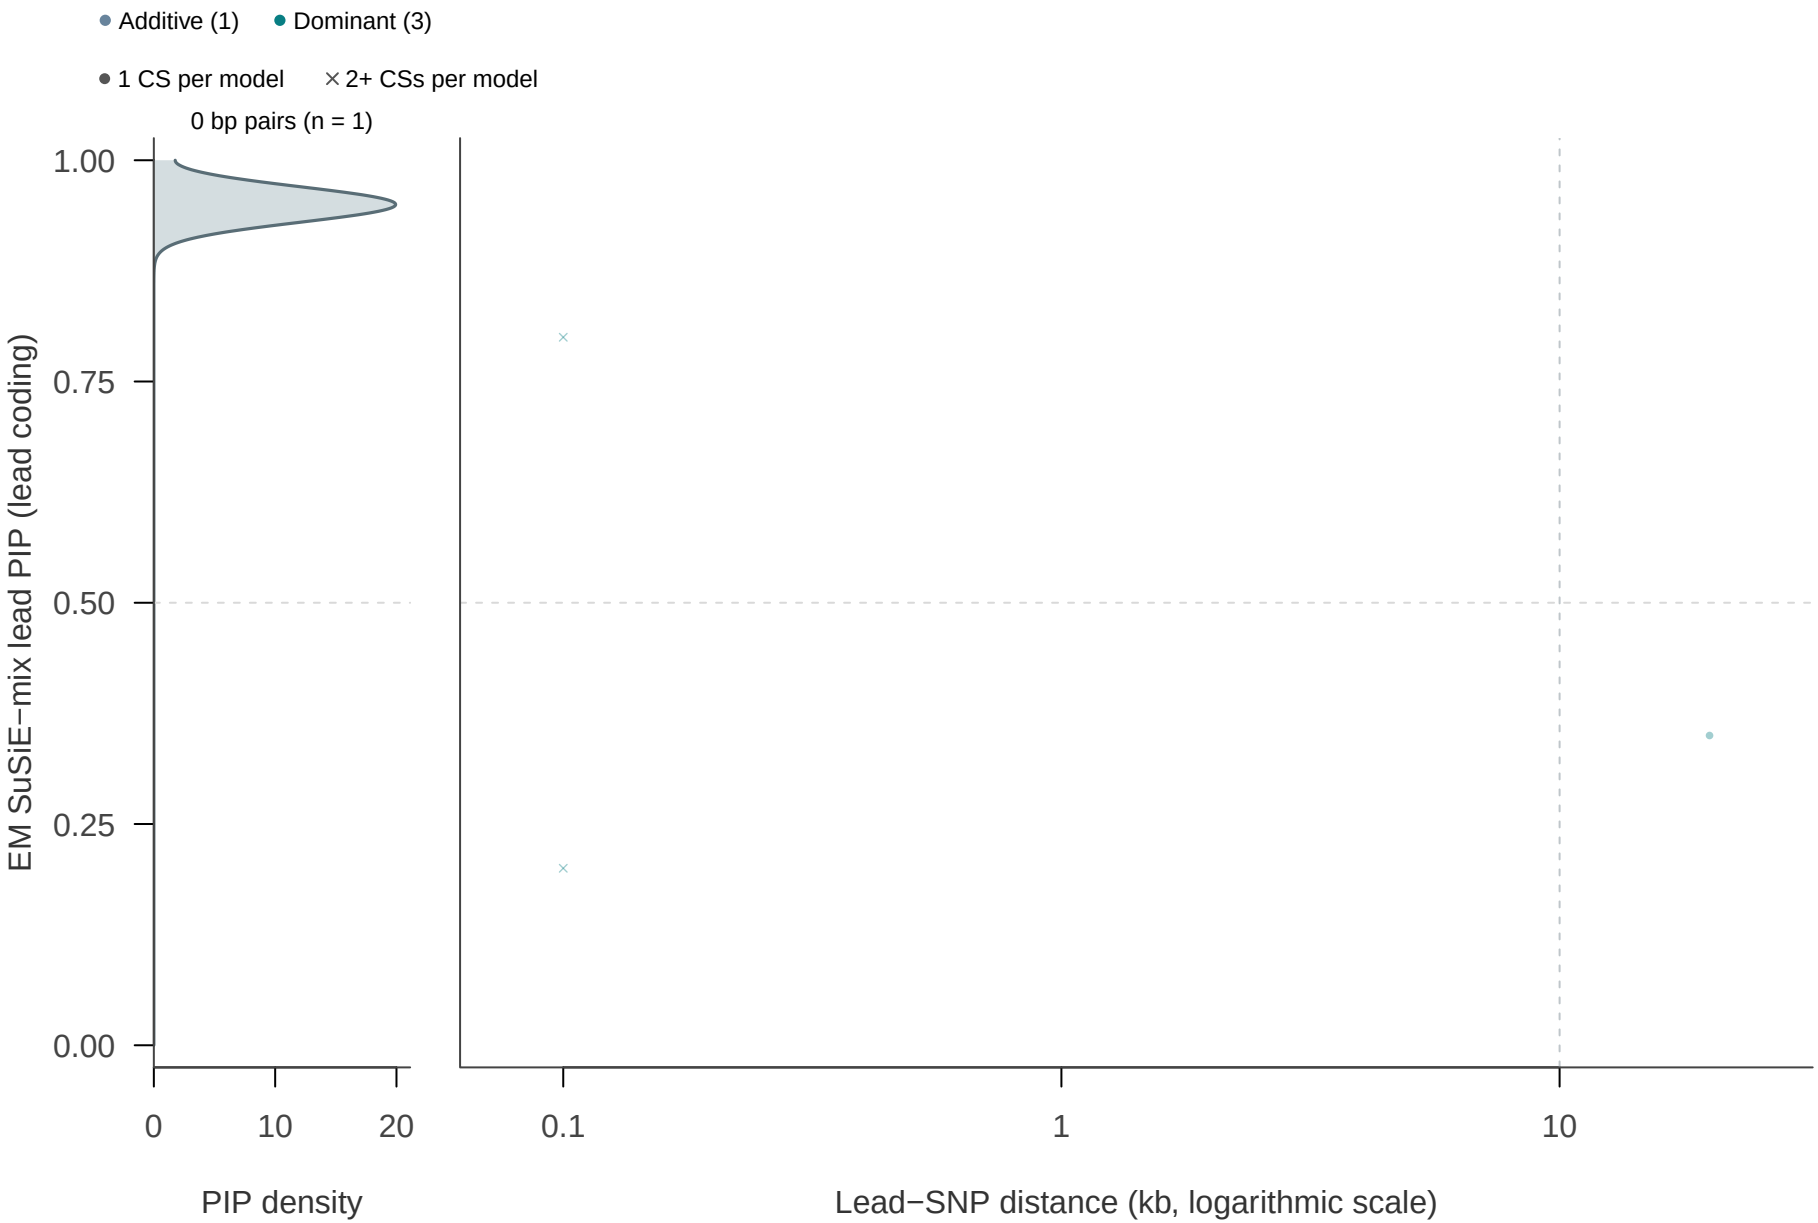
Lead−SNP distance and support across matched credible sets

Same lead SNP: 1 (20.0%) | Different lead SNP: 4 (80.0%)

Blood | EM iteration 18 | 4 regions | 5 matched CS pairs | equal CS counts

Distance >10 kb: 2 (40.0%) | >100 kb: 1 (20.0%) (% of all pairs)



Left: marginal PIP density at 0 bp (area = 1). Right: one point per positive−distance CS pair.

Exact SNP agreement uses variant IDs; 0 different−SNP pairs have 0 bp distance. Counts include all pairs.

Matching minimizes total one−to−one distance. 1 pairs lack a valid PIP; retained in counts and distance tables.
